

How do I collect dust samples with a vacuum system?

By purchasing the analysis service by Lis Biotech you have received a dust collection kit that contains: **1 pair of gloves, 1 cassette (sampler device), 1 envelope, and a Chain of Custody (CoC) form.**

PLEASE FOLLOW THE NEXT STEPS:

The test will be ran on the dust extracted from the cassette, so make sure to select an area with the most dust possible.

Not enough sample can drive non-accurate results.

DO NOT place the COC form inside the plastic bag with the sample.

The Turnaround Time (TAT) SD, 1, 2, 3, or 5 days depends on the purchase made online.

If you prefer to use another mail service to send your sample to our lab, please mail it to:
